OUTPUT:

The screenshot shows a web browser window with a single tab titled 'Register'. The address bar shows the URL '127.0.0.1:5500/reg.html'. The page content is a registration form with the heading 'Please fill in this form to create an account.' The form consists of several sections separated by horizontal lines. The first section contains labels for 'Username', 'Email', 'Department', and 'Age'. Below each label is a corresponding input field: a text box for Username, a text box for Email, a dropdown menu for Department (currently showing 'CSE'), and a text box for Age. The second section contains a label for 'Phone number' and a text box for entering the phone number. At the bottom of the form is a red button labeled 'Register'. The browser's sidebar on the right shows various icons for search, bookmarks, and settings.

Question-2:

Develop a flask program which should contain at least 5 packages used from [Solution: pypi.org](https://pypi.org)

Packages used:

1. render_template
2. url_for
3. redirect
4. request
5. abort

Program :

python_packages.py

```
from flask import Flask,render_template,request,redirect,url_for,abort
```

```
app=Flask(__name__)
```

```
@app.route("/")
```

```
def home():
```

```
    return render_template("register.html")
```

```
@app.route("/register",methods=["POST","GET"])
```

```
def register():
```

```
    if request.method=="POST":
```

```
        username=request.form.get('username')
```

```
        email=request.form.get('email')
```

```
        phone=request.form.get('phone')
```

```
        if username=="admin":
```

```
            return redirect(url_for("admin_page"))
```

```
            return render_template("home.html",username=username,email=email,phone=phone)
```

```
@app.route("/admin")
```

```
